

iASSIST[®]

SYSTEM

BETTER PATIENT OUTCOMES IN THE PALM OF YOUR HAND

The iASSIST System provides a compact, electronic guidance system designed to help surgeons align and validate bony resections in real-time within the surgical field.

- Works with traditional instruments for minimal workflow disruption.
- Intraoperative validation of resections in the surgical field without the use of additional imaging equipment.
- Guidance technologies have shown a 25% lower revision rate due to loosening or lysis at 8 years.⁷
- Radiological outcomes have shown that the iASSIST System's validation feature increases precision and accuracy compared to conventional instruments.⁸
- iASSIST provides 88% good or excellent patient satisfaction.⁹
